CAGE Alcohol Abuse Screening Tool

The CAGE questionnaire, the name of which is an acronym of its four questions, is a widely used screening test for problem drinking and potential alcohol problems (alcoholism).

Ask your patients these four questions and use the scoring method described below to determine if substance abuse exists and needs to be addressed.

<table>
<thead>
<tr>
<th>C</th>
<th>Have you ever felt the need to cut down on your drinking?</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Have people annoyed you by criticizing your drinking?</td>
<td>Yes</td>
<td>No</td>
</tr>
<tr>
<td>G</td>
<td>Have you ever felt guilty about drinking?</td>
<td>Yes</td>
<td>No</td>
</tr>
<tr>
<td>E</td>
<td>Have you ever felt you needed a drink first thing in the morning (Eye-Opener) to steady your nerves or to get rid of a hang over?</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>

Interpreting the CAGE Screening Tool

Two "yes" responses indicate that the possibility of alcoholism should be investigated further.

The CAGE questionnaire, among other methods, has been extensively validated for use in identifying alcoholism. CAGE is considered a validated screening technique, with one study determining that CAGE test scores ≥2 had a specificity of 76% and a sensitivity of 93% for the identification of excessive drinking and a specificity of 77% and a sensitivity of 91% for the identification of alcoholism.

By far the most important question in the CAGE questionnaire is the use of a drink as an Eye Opener, so much so that some clinicians use a "yes" to this question alone as a positive to the questionnaire; this is because the use of an alcoholic drink as an Eye Opener connotes dependence since the patient is going through possible withdrawal in the morning, hence the need for a drink as an Eye Opener.
